

# Local Council Waste Management Facility

**Local Councils are suppliers of vital public facilities, and are ultimately responsible for keeping our cities and suburbs running day to day.**

One of the major Local Council portfolios is waste management, which includes everything from collecting your garbage to maintaining the intricate network of drain and sewer systems.

Nqpetro was approached to deliver a waste liquid storage solution along with a safe and practical way of emptying containers into this storage. Due to the important and public nature of the project, predominantly because of its use of limited public space, equipment and facilities, Nqpetro's expertise in engineering and delivering bespoke solutions was invaluable.

Ultimately, Nqpetro supplied a FES Bloc self-bunded tank with built in fork pockets and lifting points to ensure that the solution was accessible and easily managed. Nqpetro also worked with Council to design a suitable drain tray to meet the needs of their council workers as well as the general public.

Being a public infrastructure project that was used both by Council and constituents, there was a set location for where waste could be removed. Nqpetro modified and adapted both the tank and the installation process to suit in the limited space, the requested orientation and other access requirements.

Nqpetro's commitment to sustainability is complementary to the policies of local councils, and as part of our solution we were able to help Council re-purpose items to create a platform which further improved access, functionality and sustainability.

We have now installed two of these solutions at local facilities, with great feedback received from both locations so far. Nqpetro thrives in delivering creative solutions to a broad range of industries. If you are in need of a waste management solution, or any other feat of engineering brilliance, get in contact with our friendly team today

## SOLUTIONS OFFERED

- Supply and install a FES Bloc Self-Bunded Tank, taking into consideration location and client-specific requirements for orientation, access and serviceability.
- Design, create and install a custom bolt-in waste liquid drain tray to suit any FES Bloc Self-Bunded tank from 1,000L to 13,000L.
- Deliver a bespoke, effective project effectively within a highly controlled budget, timeline and sustainability framework.
- Provide ongoing communication and support to the client as they use and maintain their liquid waste storage solution.
